

Harborage CDD Monthly Report *February 2016*

***Turf* – Good condition with little fungal pressure. We will be making another fertilizer application in March.**

***Shrubs* – The Hawthorne are continuing to decline due to Pythium root rot. We will remove as necessary. Otherwise in good health.**

***Palms* – We will continue to monitor the Washingtonia palms. I will do my best to let the board know if there are any that need to be removed.**

***Irrigation* – There haven't been any major issues with irrigation. We have some beneficial rains aiding in watering the turf. With the high winds that come with the cold fronts, the irrigation can have little effect. We will continually monitor and adjust the irrigation as necessary.**

We look forward to working together in maintaining a constantly evolving landscape.

Thank you and have a great day,

Steve Sutton
