

**Harbourage at Braden River CDD
Bloomings Landscape July report**

Good afternoon,

Turf - we removed selected Indian Hawthorne and replaced the areas with St augustine turf. We have seen some insect activity and these areas were treated with a systemic insecticide. We will monitor and treat any new areas that become active.

Shrubs - The Hawthorne continue to decline and we will continue to remove them as necessary.

Palms - seem to be good health. There have not been any Washingtonian removed this month. We will continually monitor their condition.

Irrigation - The irrigation is operating properly and running 2 days a week. Except for the areas of new turf which are running every day.

Thank you and we will continue to work together to maintain a constantly evolving landscape.

Steve Sutton
