

BLOOMINGS LANDSCAPE REPORT MARCH 2016
Harbourage at Braden River CDD

Turf - overall healthy. Fertility applied on the 30th. Weed control on going.

Shrubs - more Hawthorne removed from entry median and more still to be removed.

Palms - overall in good health. Fertility to be applied to queen palms on southern fence line week of April 11th. Washingtonian palms still appear in good health. We continually monitor their condition.

Irrigation - 2 zones found not fully functional in the entry median. Repair made and turf is recovering. We are still in our winter watering program. Water has been reduced by 50% since January. We will increase percentage as necessary.

Thank you and we will continue to work together to maintain a constantly evolving landscape.
