

Harborage CDD Monthly Report *December 2015*

Turf – Good condition with little fungal pressure. Weeds will be treated again in Jan. Turf will be fertilized in January. The next application of fertilizer will be in March.

Shrubs – The Hawthorne are continuing to decline due to Pythium root rot. We will remove as necessary. Otherwise in good health. We will be fertilizing the shrubs in February.

Palms – We will continue to monitor the Washingtonia palms. I will do my best to let the board know if there are any that need to be removed.

Irrigation – There haven't been any major issues with irrigation. It has been unseasonably warm with moderate winds over the last month or so. And with little to no rain, it has caused some dry areas. We address these areas first, when inspecting the system, to be sure that the irrigation is working automatically.

We look forward to working together in maintaining a constantly evolving landscape.

Thank you and have a great day,

Steve Sutton
