

## Harbourage at Braden River- Landscape Report from Bloomings Landscape

### September 2016 Report

Turf - we have had some insect activity that is continually treated as needed. Turf weeds are germinating due to copious amounts of rain fall and will be sprayed again in this month. Fertility will also be applied in October.

Shrubs - overall in good health. We will continually remove declining Hawthorne. fertility will be applied this month.

Palms - we continually monitor the condition of the Washingtonian palms.

Irrigation - no major issues. We will determine what repairs need to be made (if any) after the sewer repair is completed on Natalie way.

Thank you and we look forward to working together to maintain a constantly evolving landscape.

Steve Sutton - Bloomings Landscape
